

**METHOD OF INFORMATION DISSEMINATION IN A NETWORK OF END
TERMINALS**

ABSTRACT OF THE DISCLOSURE

5

A method (20) of disseminating information by a first end terminal (6) in a network having a plurality of end terminals (6) is disclosed. The method (20) includes the first end terminal (6) receiving (22) information from an information source, validating (24) the information and storing (28) the validated information. The method (20) also includes automatically forwarding (34) the validated information to a second end terminal (6) of the plurality of end terminals (6) over a communication channel established between the first and the second end terminals (6). The communication channel is established for a purpose separate from forwarding said validated information.
